Profitability

- EBITDA Earnings Before Interest, Taxes, Depreciation, and Amortization, is an alternate measure of profitability to net income. By excluding depreciation and amortization as well as taxes and debt payment costs, EBITDA attempts to represent the cash profit generated by the company's operations. (Investopedia)
- Proforma Financials When it appears in financial statements, it indicates that a method of calculating financial results using certain projections or presumptions has been used. Essentially, a pro forma financial statement can exclude anything a company believes obscures the accuracy of its financial outlook and can be a useful piece of information to help assess a company's future prospects. (Investopedia)

Profit & Loss Statement

The profit and loss (P&L) statement is a financial statement that summarizes the revenues, costs, and expenses incurred during a specified period – typically quarterly and annually. These records provide information about a company's ability or inability to generate profit by increasing revenue, reducing costs, or both. P&L statements are often presented on a cash basis or accrual basis. (Investopedia)

- Assess the profitability of an agency
- Compare periods to determine trends (YoY; QoQ)
- Develop Net Income or EBITDA. <u>Earning Before Interest</u>, Taxes, Depreciation and Amortization.

Profit & Loss Statement

- Breakdown of Revenue
 & Expenses
- Compares prior year, budget to current year
- Helps identify areas of improvement
- Can be the basis of comparison to other similar businesses
- Starting point for future budgets and proforma financials
